

How will PHILEO benefit you financially?

An average American drinks approximately 68 cups of water a day. A gallon of bottled water in the U.S. costs an average of \$0.99. If each member in a family of four consumes eight cups of water a day, that would accumulate to roughly two gallons of water per day. As a result, an average family of four would be spending a total of \$712.80 annually on gallon sized bottled water. However, PHILEO's water purification system will allow you to enjoy fresh water conveniently in your home with the push of a button at a very affordable price.

How will PHILEO benefit your health?

Water is essential for a good and healthy body. Every system in the body depends on water. Water extracts toxins out of organs, increases the performance of the digestive system, and carries vital nutrients to every cell. Since water makes up about sixty percent of one's body, it is essential to constantly replenish the body's water supply with a sufficient amount of water to accommodate for the amount that is steadily lost through respiration, perspiration, and urine excretion. In order for the body to avoid dehydration and to function properly, it is vitally important to constantly restore your water supply by consuming plentiful amounts of water or foods that contain water.

UF FILTER vs. RO FILTER

UF or Ultra Filtration is a membrane filtration technology. UF filters out bad ingredients through the semi-permeable membrane, leaving minerals and nutritional value of the water, while RO or Reverse Osmosis filter filters out all the ingredients of water, including the minerals and nutritional substances with pore-less membrane. Additionally, RO filter only cleans 20% of the water, while sending 80% of unfiltered water back to the drain and RO filter water purifier required a pressure pump to force the water through its pore-less membrane.

EASY INSTALLATION & MAINTENANCE

The PHILEO water purification system was designed for quick and easy installation. Simple filter replacement is virtually the only maintenance you need. You can easily keep track with display screen. PHILEO water purifier's exterior panel is made with tempered glass that is easy-to-clean surface and extremely durable.

water purification system

Excellent Purifying Effects

PHILEO Hot & Cold Water purifier provides the finest quality of water through its highly advanced 4-step filtration system.

Highly Efficient Water Tank

Holds two anti-bacterial tanks for both hot and cold water that is made of stainless steel, preventing propagation of bacteria while effectively controlling the water supply.

Control Valve

The control valve connects the four filters to the main water pipe. By including a control valve in the PHILEO, filter replacement has never been easier. It is not necessary to shut off the main water pipe when making replacements, but rather to turn the control valve shut so that water flow is cut off. We are extremely proud of this new feature and are provided with all of our models.

Flexible Numeric Display (FND)

The FND lights up all of the functions of the product. When activated and in use, the chosen function is lit to provide a visual notification of the operation. This display is especially convenient when filter replacement is needed.

High-Tech Safety Device

PHILEO Water Purifier offers a built-in temperature sensor and water level controller. The temperature sensor assures that both water tanks are of accurate temperatures, whereas the water level controller makes certain that proper water levels are contained. Water level controller is known to be the 'Perfect Energy Saving System' contributing to economic efficiency and conservation of electricity.

PHILEO 817

Dimension: 14 1/2" x 14 1/4" x 14 1/2"
Purification Capacity: 951 G/Day
Rated Voltage: 110V
Water Tank Capacity: 1.4 gal
Net Weight: 33 lbs

Cold Water System

Cold Water Tank: Stainless Steel
Cold Water Capacity: 4 gal

Hot Water System

Heater Type: Electric Heat
Hot Water Tank: Stainless Steel
Hot Water Capacity: 0.7 gal
Temperature Control: Auto Thermosy

PHILEO 816

Dimension: 14 1/2" x 14 1/4" x 14 1/2"
Purification Capacity: 951 G/Day
Rated Voltage: 110V
Water Tank Capacity: 1.3 gal
Net Weight: 49 lbs

Cold Water System

Cold Water Tank: Stainless Steel
Cold Water Capacity: 4 gal

Hot Water System

Heater Type: Electric Heat
Hot Water Tank: Stainless Steel
Hot Water Capacity: 0.8 gal
Temperature Control: Auto Thermosy

PHILEO
we have the best of everything

PHILEO 1005

PHILEO 1005 is an under-sink model water purifier that uses some advanced water filtration system as the stand models. It is an ideal model for compacted kitchen. PHILEO 1005 gives you fresh filtered water right by the sink, where it can be easily accessible while preparing the food.

The Clean System of PHILEO

PHILEO guarantees the quality of each liter through the Flexible Numeric Display on each PHILEO Water Purifier. When the filter needs to be replaced, the service indicator will appear on the FND.
